

BARCODE PRINTING SCALE

BAYLAN TM-F

User's Manual

2020

Warning and Attention

Warning

- ◆ Don't use scales in the following situations:
 1. Wobbling and swaying place;
 2. Air-conditional and fan blowing straight place;
 3. Dusty and wet environment;
 4. Flammability and explosive place;
- ◆ Plug the power switch to the good grounded socket, or it will cause personal injury.
- ◆ Ensure to cut the power off first when the scale is connected to other equipment, or it will cause the equipment damaged.
- ◆ Don't plug in or pull out each communication interface with power on, such as RS232 COM port, etc.
- ◆ Don't plug in or pull out switch when the power is on.
- ◆ This type of scale uses thermal printer, so only thermal printing paper can be used. Please use correct type of paper before print, or it will cause the irreparable damage to the printer head and printer.

Attention

- ◆ Put the scale on a level table-board. Adjust four corner nuts to make the level bubble be in the middle of gradienter. Try to make sure the sensor work in level status and keep accuracy of weighing.
- ◆ If printer goes wrong or shows wrong, even gives warning without printing, that mean the scale has got problems. You'd better check the paper whether put correctly or the printer head is in the correct position, or the light sensor is dirty. If it is dirty, clear the printer head and the printer for every two weeks. Keep the print paper clean and good quality.
- ◆ After changing the paper, the printer buttons are found to be no effective or print wrong. It probably caused by the type of the paper not being the same size. The problem can be solved by re-debugging, putting paper again and making paper checkout.
- ◆ Please don't dismantle, break or impact the scale.

一、 Explanation and instruction set

1.1 Noun explanation

- ◆ PLU: that refers to commodity information,including serial number,commodity code,unit price,department number,valuation method,expiry date etc.
- ◆ Chinese characters location code: each Chinese character is represented by 4 digit codes when entry Chinese information,Chinese characters location code is 4 codes for each Chinese character。
- ◆ ASCII code: each character is represented by the 4 digit codes when input character information,each code is ASCII code。
- ◆ Weighing valuation: a pricing method of PLU,namely according to the weight to value the price of goods。
- ◆ Piece rate pricing: a pricing method of PLU,namely according to the quantity of the goods to calculate the price。
- ◆ Fixed weight valuation: a pricing method of PLU,namely according to the amount of a fixed weight to calculate the price of goods。

1.2 Instruction set

	Requirements for Operation purpose	Methods	Step		The realization of operating results
			The first step	The second step	
1	Adjustable PLU date		Press the shortcut,when press once,it chooses the up shortcut,when press twice in two seconds,it chooses the down shortcut		tare weight, unit price and so on of the PLU can be displayed
		②	Press the number keys	Press 	①and② is through PLU number call commodity information
		③	Press 	Press the number keys	(3) through the code calls the commodity information
2	Clear the PLU information of the current display	①	Press 		Clear the PLU information of the current display
3	Tare	①	Press  after objects are placed on the scale		Remove the tare weight

		②	Input the weight value of the tare	Press 	
4	Check the time	①	Press 		Display the date month year of the current time
5	The feature set	①	Press 	Press  after input the function password	enter the corresponding feature set
6	The unit price discount (label paper and continuous paper can apply)		Press 	Press  after enter the discount percentage	Implement the unit price discount
7	The whole list discount (continuous paper sales)	①	Press  in the condition of the cumulative	Press  after enter the whole list discount	Implement the whole list discount
8	Total rounding (continuous paper sales)		Press  in the condition of the cumulative	Press  Input rounding amount	Implement total rounding
9	Change the count number	①	According to the quantity	Press 	Implement the change of quantity
10	Total content clear	①	First press  (or  ,  , ), second press 	Press 	Implement all memory of  (or  ,  , )clear

11	Automatic weighing printing method	①	First press PLU shortcut key,second press 	Press  in 5 seconds	Enter the state of automatic printing (weighing method)
12	Automatic print count method	①	First press PLU shortcut key,second press  .Input interval time after Press  in 5 seconds		Enter the state of automatic printing (count method)
13	Automatic print fixed weight method	①	First press PLU shortcut key,second press  .Input interval time after Press  in 5 seconds	Press 	Enter the state of automatic printing (fixed weight method)
14	Cancel the automatic printing function	①	Press 		Restore single print function
15	Continuous paper sales	①	press the PLU shortcuts, then put items.when it is stable ,the light will be lit.	press  (or  ,  , ), and Cashier on four customers at the same time	Aggregate amount , press  .After input paid-in amount, press  键,and print out the receipt

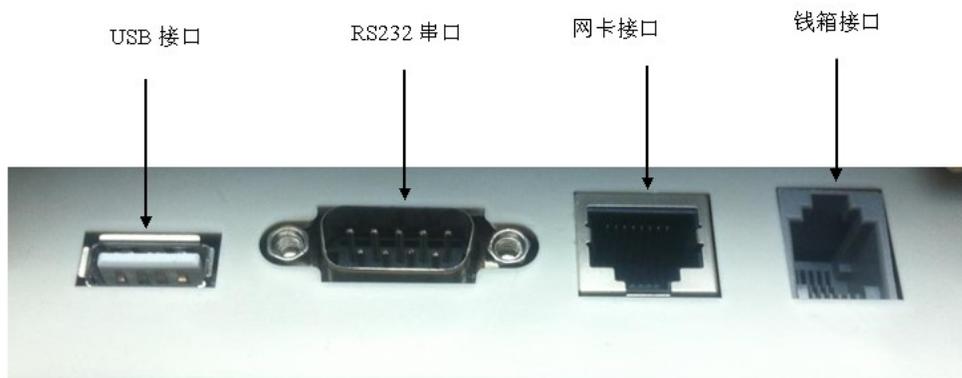

二、 Overview

2.1 Appearance

2.1.1 The appearance figure of barcode printing price computing scale

2.1.2 Each interface diagram Of barcode printing price computing scale

Note:the configuration of the balance of various sizes is different, so the installation interface may be different. please determine before buying.

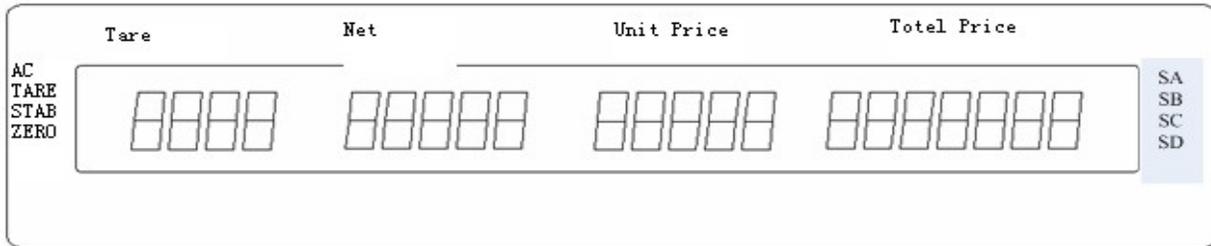

2.2 Installation

The show rod of this kind of scale don't need to install,and just put the poling stand up.

2.3 Display and keyboard

2.3.1 Display

1.The photo of Stud type of barcode printing scale

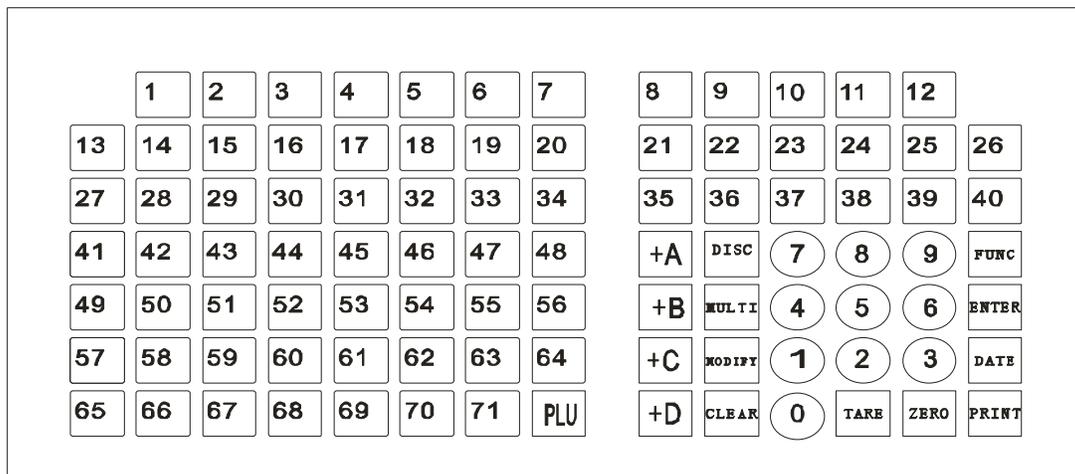

Indicator Lights

- Power source: When the scale is powered on, the power indicator light will be lit
- Tare: When taring scale or display shows tare weight , tare indicator light will be lit
- Stability: When weight indicated on display is stable, stability indicator light will be lit
- Zero weight: When display shows zero weight, zero weight indicator light will be lit
- SA、SB、SC、SD: Corresponding to **+A**, **+B**, **+C**, **+D** when cumulative amount is available, indicator light will be lit

2.3.2 Keyboard

1.The keyboard map of platform type barcode printing price computing scale :As above (platform type figure)

2.The keyboard map of Stud type of barcode printing price computing scale:

0 ~ **9** : Number key is used to input number values

1. [PRINT]—Prints receipt
2. [DATE]—Display the current date and time or as a cashier input paid-in amount as a cashier
3. [CLEAR]—Clear the input data、 memory, and back to the main interface (namely standby)
4. [+A]、 [+B]、 [+C]、 [+D]accumulation keys, 4 sets total, all four sets can be accumulated simultaneously, with continuous paper printing

5. [DISC]—Input unit price discount when in the state of single unit , input total purchase discount when in the state of accumulated merchandise
6. [MULTI]—Can be used to input number of units when calculating by merchandise units (does not need to be operated with items loaded)
7. [MODIFY]—Can be used to adjust cumulative data.
8. [FUNC]—It is used when setting. Various functions can be reset using the “FUNC” key。
9. [ENTER]—Each time a function is reset, this button is be used for verification, otherwise the data remains unchanged.
10. [TARE]—Subtracts tare weight. When tare weight is loaded, key is ineffective。 When in setup state, proceed to next step.
11. [ZERO]—eliminates non-zero digits outside of rounding range and inputs value of 0; note that the rounded off value cannot exceed 4% of total weight. When in setup state, proceed to next step. When in accumulated merchandise is loaded, pressing key leads to rounding of total price.
12. [PLU]— Call the PLU date

2.4 Specifications

- ◆ Power: 220V^{+10%}_{-15%} Frequency: 50Hz
- ◆ Temperature: Normal operating temperature ranges 0°C~40°C; Storing temperature ranges -10°C~40°C
- ◆ Humidity: ≤85%RH
- ◆ Maximum load (verification scale): 3kg (1g), 6kg (2g), 15kg (5g), 30kg (10g)
- ◆ Accuracy level: Level Ⅲ
- ◆ Display: Two-sided red LED display: Tare weight display 4 digits, net weight display 5digits, unit price display 5 digits, total price display 7digits;

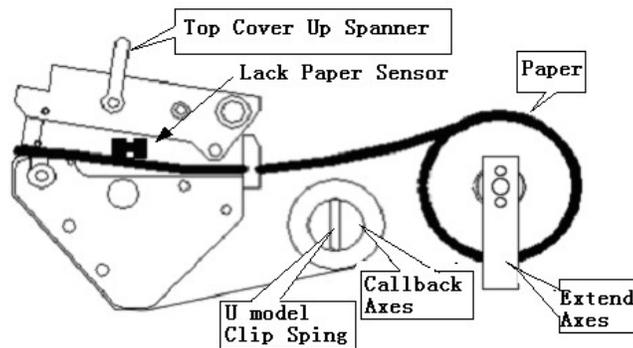

2.5 Printer

2.5.1 Printer parameters

- ◆ Printing method: Thermal
- ◆ Font: GB grade 1, 2 Chinese fonts
- ◆ Printing speed: 75mm/s
- ◆ Printing width: 56mm
- ◆ Paper roll width: 60mm (Max.)
- ◆ Paper roll outside: 100mm (Max.)
- ◆ Paper roll inside diameter: 25mm (Min.)

2.5.2 Install paper

1. First the paper roll installs on the distribution of shaft
2. Raise the print head, put the paper into the print head directly, and the label paper is located under the lack of paper sensor
3. Press the print head;
4. Wire on the interleaving paper recycling shaft with U circlip can (as shown in the figure below)

2.5.3 Switch the state between label paper and the continuous paper

When fitted with label paper, barcode printing price computing scale switch is opened. the bar code printing price computing scale perform stroke self-check, at the same time press the number keys **5**, the screen displays or words, which suggests that switch is successful, electronic scale automatic restart.

When fitted with continuous paper, barcode printing price computing scale switch is opened, the bar code printing price computing scale perform stroke self-check, at the same time press the number keys **6**, the screen displays or words, which suggests that switch is successful, barcode printing price computing scale automatic restart.

* if the first switch is not successful, please switch again.

2.6 The method of reading This manual

- ◆ When reading manual, operations are listed on the left column, the image displayed after operation is shown on right column.
- ◆ Before reading instruction manual, please verify the state of the electronic scale.
- ◆ If an accident occurs during operation, the  key can be directly pressed to exit the operation, and previous changes will not be saved
- ◆ Symbols referred to by the manual as shown on display below:

1. Corresponding numerical digits

0 1 2 3 4 5 6 7 8 9

2. Corresponding alphabetical letters

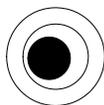

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

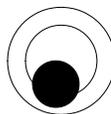

三、 User Guide

3.1 Initial preparation

1. Before use please ensure the scale is well connected to a grounded power source
2. Ensure the scale is set on a stable surface, remove any heavy objects on the scale, and make sure the scale is not loaded
3. Make sure the scale is on a level surface, or adjust the feet so that the water bubble in the leveling instrument is in the middle, as shown in the image below

Correct position

Incorrect position

4. Before use verify that the printer is loaded correctly.

Note: If it is needed, a lightweight tray may be placed on the scale and scale can be manually zeroed, but zeroed range cannot exceed 4% of the net weight.

3.4 Sale

3.4.1 Weighing commodity sales

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
	0.0000	0.0000	0.000	0.0000
Enter PLU code , (such as for commodity No. 2), then enter 2	Welcome 2015-05-16 10:30			
	0.0000	0.0000	0.000	0.0000
When pressing PLU , unit price display will show No. 2's PLU unit price, e.g. 16 yuan/kg	Apple			
	0.0000	0.0000	0.000	0.0000
Put the goods that stay weight (e.g. the weight of 1 kg)	Apple			
	0.0000	0.0000	0.000	0.0000
Press PRINT , and it can print out the	Welcome 2015-05-16 10:30			
	0.0000	0.0000	0.000	0.0000

ticket and take goods				
-----------------------	--	--	--	--

3.4.2 Piece goods sales

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Welcome 2015-05-16 10:30 </div>			
Enter PLU code, (such as for commodity No. 3), then enter 3	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Welcome 2015-05-16 10:30 </div>			
When pressing , unit price display will show No. 3's PLU unit price, e.g. 18 yuan/unit	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Pear </div>			
If selling only one item, directly press to print receipt. If selling multiple units of merchandise (e.g. 5 units), enter 5	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Pear </div>			
Press and print receipts	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Welcome 2015-05-16 10:30 </div>			

3.4.3 Multiple products sales

Note: this function can be used only in the condition of continuous paper .

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Welcome 2015-05-16 10:30 </div>			

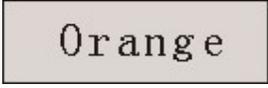

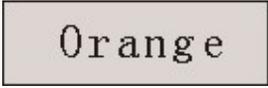

Enter PLU code , (such as for commodity No. 2) then enter 2				
When pressing , unit price display will show No. 2's PLU unit price, e.g. 16 yuan/kg				
Put the goods that stay weight (e.g. the weight of 1 kg)				
Press ,and start to accumulate price				
Enter PLU code of second commodity item, (such as for commodity No. 4), then enter 4				
When pressing , unit price display will show No. 4's PLU unit price, e.g. 7 yuan/kg				
Put the goods that stay weight (e.g. the weight of 600 g)				
Press (or , ,)				
Press to print receipt, unload				

merchandise (Note: if a receipt is not printed, you must press  to erase the accumulated contents of current transaction, to avoid affecting the next transaction)				
--	---	---	---	---

Note: the piece goods sales 50 most at a time

3.4.4 Change function of continuous paper

This function is valid only in the condition of continuous paper.in the condition of continuous paper, after aggregate amount, press the "date" key after aggregate the amount and input paid-in amount, which can realize the change function.

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode				
				
Enter PLU code, (such as for commodity No. 2), then enter 				
				
When pressing  , unit price display will show No. 2's PLU unit price, e.g. 16 yuan/kg				
				
Put the goods that stay weight (e.g. the weight of 1 kg)				
				
Press  , and start to accumulate price				
				
Press 				

Input the amount the customer pays, for example if customer pays 20 yuan, enter 2000	Orange			
Press and print receipts, then take the goods	Welcome 2015-05-16 10:30			

3.4.5 Fixed weight of goods sales

Fixed weight merchandise sales must be preset on scale (consult 5.1 PLU information input). Call the PLU, press

or (, ,), press and print receipt before printing fixed weight of goods sales .

3.5 Taring

The scale can three kinds of taring: preset taring, physical taring, digital taring. The preset tare involves the PLU settings, so it is explained in the PLU settings sections. The settings of physical taring, and digital taring as follows. It is not allowed to peel them when the window is not at zero state it is not allowed to peel them, after the scale powered on.

3.5.1 Physical taring

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
Call commodity No. 2 PLU (as in above section 3.4.1), then press 2 and	Apple			

Put the goods that stay weight (e.g. A 600 g tray)	Apple			
Press	Apple			
Put the goods that stay weight (e.g. the weight of 1 kg)	Apple			
Press and print receipts, then take commodity and tray	Welcome 2015-05-16 10:30			

3.5.2 Digital taring

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
Call commodity No. 2 PLU (as in section 3.4.1) .Press and	Apple			
Input tare weight (e.g. 600g)	Apple			
Press	Apple			

Put the tare goods that stay weight (e.g. net weight of 1 kg, tare weight of 600g)	Apple			
Press , print receipts and take the goods	Welcome 2015-05-16 10:30			

3.6 Changing Unit Price

Note: Only when the settings allow manual discounts (details on settings consult section 4.1 to see whether settings allow discounts) , the user can the user change unit prices.

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
Call No. 2 commodity PLU (as in section 3.4.1) Press and	Apple			
Input new unit price (e.g. 15.00 yuan/kg)	Apple			
Put the goods that stay weight (e.g. The weight of 1 kg)	Apple			
Press , print receipts and take the goods	Welcome 2015-05-16 10:30			

※ The above operation is allowed when the settings allow changing price. It temporarily changes the unit price and will not be saved after printing a receipt. If you want to completely change the unit price, please consult section 5.1: PLU information editing.

3.7 Discounts and Rounding

This scale system supports unit price discounts and total price discounts. In default of commodity information unit price that is not under the condition of zero can discount.

3.7.1 Unit price discounts

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
Call the commodity No. 2's PLU code (as in section 3.4.1), and press 2 and	Apple			
Put the goods (e.g. The goods weighs 900g)	Apple			
Press	Apple			
Input discount percentage. For example, if desired price is 80%, enter "80"	Apple			
Press	Apple			

Press 	Apple			
				
Press  , print receipts and take the goods	Welcome 2015-05-16 10:30			
				

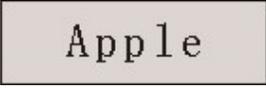

3.7.2 Total price discounts (Note: this section is effective only in the condition of continuous paper.)

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
				
Call the commodity No. 2's PLU code (as in section 3.4.1), then press  and 	Apple			
				
Put the goods (e.g. The goods weighs 900g)	Apple			
				
Press 	Apple			
				
Press  , If the desired price is 90% , enter  	Apple			
				
Press 	Apple			
				

Press  , print receipts and take the goods				
				

3.7.3 Rounding total price (Note: this section is effective only in the condition of continuous paper.)

When the customer is making a purchase, the situation may occur when the price may be a few cents larger than a whole denomination, and the customer may not have loose change available. At this time the cashier may exercise discretion and give the customer a slight discount and take off the extra amount. Note: price rounding function can only be used when rounding function is on in system and set rounding range, consult section 3.7.4 on rounding range settings.

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode				
				
Call PLU code, such as commodity No. 2, then press  and 				
				
Put the goods (e.g. The goods weighs 875g)				
				
Press 				
				
Press 				
				
Input change amount. we see the amount of 0.38, then we input  				
				

Press 	Apple			
				
Press  , print receipts and take the goods	Welcome 2015-05-16 10:30			
				

3.7.4 Setting of rounding range

The password of the rounding range is “8815”

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
				
Press 	Function system para(39706)			
				
Input    	Function system para(39706)			
				
Press 	Function system para(39706)			
				
Input the desired rounding range. For example, if 5.00 is the desired rounding range, input   	Function system para(39706)			
				
Press 	Welcome 2015-05-16 10:30			
				

The set is completed. If the rounded amount exceeds 5 yuan, the t operation cannot be completed

3.8 Auto printing

3.8.1 Auto printing (weighing method)

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Welcome 2015-05-16 10:30 </div>			
Press PLU shortcut key (such as 6 keys, and assuming that is the whole case of apple, 6 key preset unit price is RMB 1.20 yuan/kg, weighing 500 g)	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Function system para(39706) </div>			
press	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Function system para(39706) </div>			
Press in 5 seconds	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Apple </div>			
Put the first cases of apple (e.g., 10 kg), it will print out the label automatically when the scale stabilized.	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Apple </div>			
Take the apple	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Apple </div>			
Put the second cases of apple (e.g.9.5 kg), it will print out the label automatically when the scale	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Apple </div>			

stabilized.				
Take the apple, and repeat the above operation	Apple			
All is ok ,press and restore the standby mode	Welcome 2015-05-16 10:30			

3.8.2 Auto printing(counting method)

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
Press the PLU shortcut key (such as 7 key, and assumes that no. 7 key corresponding is the cigarette, the unit price is RMB 1.50 yuan/package)	Pear			
Suppose you want to print 10 cigarettes , press[10]	Pear			
press	Pear			
Press	Pear			
Press in 5seconds	Pear			

Press numeric keys,input the interval seconds , such as 3 seconds, and press [3]	Pear			
Press automatically print out the first label, and then it prints every 3 seconds .	Pear			
Press ,the print ends and restore the standby mode	Welcome 2015-05-16 10:30			

Note: input interval seconds that is from 1 second to 5 second and integer to it.

3.8.3 Auto printing(fixed weight method)

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
Press the (such as 8 key, and assumes that no. 8 key corresponding is the white sugar, the unit price is RMB 1.50 yuan/package)	Sugar			
Press	Sugar			
Press in 5 seconds	Sugar			

Press numeric keys,input the interval seconds , such as 3 seconds, and press [3]	Sugar			
			0.00	
Press  , automatically print out the first label, and then it prints every 3 seconds .	Sugar			
		0.00	0.00	0.00
Press  ,the print ends and restore the standby mode	Welcome 2015-05-16 10:30			
	0.00	0.00	0.00	0.00

Note: input interval seconds that is from 1 second to 5 second and integer to it.

3.9 Clear the accumulated information

You can press  (or , , ) +  + , clear all the cumulative information of 
(or , , ) after accumulated many commodities,and can't clear single commodity.

四、Setting

4.1 Change the password

Note: Midway or after modify the completion of the above parameters , press  namely save and exit;
 pressing  is not saving and exiting.

4.3 System Date/Time Settings

Electronic scale includes internal clock that user can reset on their own. Function code of setting date/time is “39704”.

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode				
Press 				
Press 3 9 7 0 4				
Press  and enter year. For example, set year as 06, press 0 6				
Press  and enter month. For example, set month as May, press 0 5				
Press  and enter date. For example, set date as the fifteenth, enter 1 5				
Press  and enter hour. For example, set hour as 11 o'clock, enter 1 1				

Press  and enter minute. For example, set time as 32 minutes, enter 3 2				
				
Press  and back to standby mode.				
				

4.4 Weight Calibration

Maintenance password of weight calibration maintenance password is "54321".If the password is invalid, you can also use the password "39708", it is valid usually. Note: password must be five digits, and the first digit must be nonzero.

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode				
				
Press 				
				
Press 5 4 3 2 1				
				
Press  and set user password. For example, set 54321 as password, press 5 4 3 2 1				
				
Press  and set units of gradation:				

For example, set 5g as unit of gradation of 15kg scale, press 5 and unit of gradation is 1/3000 of total capacity				
Press and set maximum scale capacity. For example, set maximum capacity as 15kg, and 1 5 0 0 0	CALIBRATION (TT OVER) 15.000			
Press and set overload capacity, usually it is 9 times the unit of gradation. For example, set overload capacity of 45g, press 4 5	CALIBRATION (ZERO) 45			
Press and set load capacity. For example, set load capacity as 15kg, press 1 5 0 0 0 (load capacity may not be lower than 1/3 of maximum capacity, or higher than maximum capacity)	CALIBRATION (FULL) 15.000			
Press and enter unloaded mode, ensure that the scale is unloaded (namely nothing is on top of weighing plate)	CALIBRATION (LOAD) XXXXXX			
Press and enter loading mode, the weight that you put on is equal to loading capacity (XXXXXX is display ISN)	CALIBRATION (POISE) XXXXXX			
When ISN is relatively stable and stability indicator light is on, press and exit.	Welcome 2015-05-16 10:30			

4.5 Shortcut Settings

Press  and return to standby mode.	Welcome 2015-05-16 10:30			
	0.0000	0.0000	0.000	0.000

The number after F is the shortcut number and what displayed in the last window is the PLU code. press , In each layer when input a PLU number, there is a shortcut number corresponding, then press .

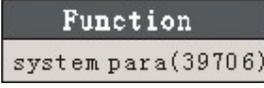

4.6 label format setting

Tag format setting is divided into general parts format setting and Text format Settings; The password of general parts format is “22222”; The password of Text format is “39705”。

This scale can be set up and store 16 kinds of label format, in which each format set consists of two parts, namely General part format and Text format .Format Numbers is from 0 to 15; As a PLU calls 3 tag format, the general part Numbers and Text Format are 3 .

the print content of general parts format includes:commodity name, tare weight, net weight, unit price, total price, packaging date,expiry date, special information, barcode, etc.; Text format printing content can be defined by the customers themselves (content editing see "5.3 Text Text editor").

4.6.1 General parts format setting

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode				
				
Press 				
				
Press 				
				
Press  and Set the width of printing label ; Such as the width is				
56,press 				
Pressing  can Switch different label serial number (n 0—n 15) ; such as 0 label format (this electronic scale only supports 0 label) ;				
pressing  、  can view the various parameter Settings of each format up and down;				

Press  and set the label length; Such as length of 40 mm, press  			
	     		

Description of Each tag format specific parameters:

Parameters Number	Parameters Name	Parameters Description
F-00	Horizontal printing width	Input the label width mm ,maximum 56
F-01	The longitudinal length of the label	Input the label width mm ,maximum 99
F-02	Printing fonts of commodity No.1	Value range: 00~16
F-03	Printing horizontal position of commodity No.1	Positive font left corner as the origin (according to the font) to the right distance mm (the same below)
F-04	Printing longitudinal position of commodity No.1	Positive font left corner as the origin (according to the font) to the below distance mm (the same below)
F-05	Printing fonts of commodity No.2	Value range: 00~16
F-06	Printing horizontal position of commodity No.2	
F-07	Printing longitudinal position of commodity No.2	
F-08	Printing fonts of commodity No.3	Value range: 00~16
F-09	Printing horizontal position of commodity No.3	
F-10	Printing longitudinal position of commodity No.3	
F-11	Printing fonts of commodity code	Value range: 00~32
F-12	Printing horizontal position of commodity code	
F-13	Printing longitudinal position of commodity code	
F-14	Printing fonts of net weight	Value range: 00~32
F-15	Printing horizontal position of net weight	
F-16	Printing longitudinal position of net weight	
F-17	Printing fonts of tare weight	Value range: 00~32
F-18	Printing horizontal position of tare weight	
F-19	Printing longitudinal position of tare weight	
F-20	Printing fonts of gross weight	Value range: 00~32
F-21	Printing horizontal position of gross weight	
F-22	Printing longitudinal position of gross weight	
F-23	Printing fonts of unit price	Value range: 00~32
F-24	Printing horizontal position of unit price	

F-25	Printing longitudinal position of unit	
F-26	Printing fonts of total price	Value range: 00~32
F-27	Printing horizontal position of total price	
F-28	Printing longitudinal position of total price	
F-29	Printing fonts of two times the net weight(Jin weight)	
F-30	Printing horizontal position of two times the net weight	
F-31	Printing longitudinal position of two times the net weight	
F-32	Printing fonts of half the unit price(Jin weight)	
F-33	Printing horizontal position of half the unit price	
F-34	Printing longitudinal position of half the unit price	
F-35	Printing fonts of unit price after discount	
F-36	Printing horizontal position of unit price after discount	
F-37	Printing longitudinal position of unit price after discount	
F-38	Printing fonts of total price after discount	
F-39	Printing horizontal position of total price after discount	
F-40	Printing longitudinal position of total price after discount	
F-41	Printing fonts of date	Value range: 00~32
F-42	Printing horizontal position of date	
F-43	Printing longitudinal position of date	
F-44	Printing fonts of time	Value range: 00~32
F-45	Printing horizontal position of time	
F-46	Printing longitudinal position of time	
F-47	Printing fonts of expiry date	Value range: 00~32
F-48	Printing horizontal position of expiry date	
F-49	Printing longitudinal position of expiry date	
F-50	Printing fonts of department NO.	Value range: 00~32
F-51	Printing horizontal position of department NO.	
F-52	Printing longitudinal position of department NO.	
F-53	Printing fonts of the shop No.	Value range: 00~32
F-54	Printing horizontal position of shop NO.	
F-55	Printing longitudinal position of shop NO.	
F-56	Printing fonts of special information 1	Value range: 00~16
F-57	Printing horizontal position of special information 1	

F-58	Printing longitudinal position of special information 1	
F-59	Printing fonts of special information 2	Value range: 00~16
F-60	Printing horizontal position of special information 2	
F-61	Printing longitudinal position of special information 2	
F-62	Printing fonts of special information 3	Value range: 00~16
F-63	Printing horizontal position of special information 3	
F-64	Printing longitudinal position of special information 3	
F-65	Printing fonts of 13 code	Value range: 00~32
F-66	Printing horizontal position of 13 code	
F-67	Printing longitudinal position of 13 code	
F-68	Printing fonts of label serial number	Value range: 00~32
F-69	Printing horizontal position of label serial number	
F-70	Printing longitudinal position of label serial number	
F-71	Printing fonts of the main bar code	Value range: 00~16
F-72	Printing horizontal position of the main bar code	
F-73	Printing longitudinal position of the main bar code	
F-74	Printing height of the main bar code	00~10
F-75	Printing fonts of emoticons	Value range: 00~16
F-76	Printing horizontal position of emoticons	
F-77	Printing longitudinal position of emoticons	
F-78	Printing height of emoticons	00~10
F-79	No	Reserve (the fixation is 00)

4.6.2 Text part format Settings

Operation	Display			
	Tare Wight	Net Weight	Unit Price	Total Price
Standby Mode				
				
Press 				

Press 3 9 7 0 5	Function system para(39706)			
Press and set printing fonts of Text1;e.g. The font size is 03,	TEXT1FONT L: 00 3*3/1.5*3mm 0			
press 0 3				
Press and set printing horizontal position of Text1; e.g the .horizontal position 10mm and	TEXT01 ABSCISSA L: 00 02			
press 1 0				

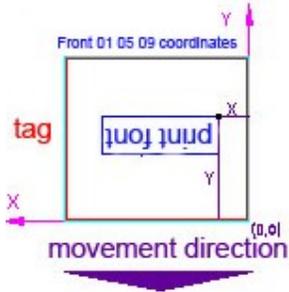

Parameter	Name of parameter	Explanation
F-00	Text1 (default is“shop name”) print font	Value available: 00~16 (The follows are same)
F-01	Text1 print (X-axis)	Setting this font top left corner be origin, counting font’s right distance to origin.

4.7 IP Address Setup

※This setup is only for electronic scales equipped for Ethernet

4.7.1 Initial Network Interface Card (NIC) IP Address

Initial network card IP address

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Welcome 2015-05-16 10:30 </div>			
				
Press 	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Function system para(39706) </div>			

Press 9 0 0 1	Function system para(39706)			
Press , and set initial network card IP address	Welcome 2015-05-16 10:30			

After initial setup of NIC, IP address is: 192.168.0.150

4.7.2 Modify the network card IP address manually

Modify the network card IP address manually(e.g.set IP as 192.158.1.10)

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
Press	Function system para(39706)			
Press 9 0 0 2	Function system para(39706)			
Press and input 1 9 2	Network IP 192.255.255.255			
Press and input 1 5 8	Network IP 192.158.255.255			

Press  and input 1	<div style="border: 1px solid black; padding: 5px;"> Network IP 192.158.1.255 </div> 	
Press  and input 1 0	<div style="border: 1px solid black; padding: 5px;"> Network IP 192.158.1.150 </div> 	
Press  and back to the standby mode	<div style="border: 1px solid black; padding: 5px;"> Welcome 2015-05-16 10:30 </div> 	

Note: You need to reopen the scale after you modify the IP or initialize the IP address

五、Content Editing

5.1 PLU Information Editing

Step	Operation	Display			
		Tare Weight	Net Weight	Unit Price	Total Price
0	Standby Mode	<div style="border: 1px solid black; padding: 5px;"> Welcome 2015-05-16 10:30 </div> 			
1	Press 	<div style="border: 1px solid black; padding: 5px;"> Function system para(39706) </div> 			
2	Press 1	<div style="border: 1px solid black; padding: 5px;"> Function system para(39706) </div> 			
3	Press  and enter the unit price (note: the price of per kilogram)	<div style="border: 1px solid black; padding: 5px;"> PLU(0001) RESERVE 0.000 </div> 			

4	Press 	<div style="border: 1px solid black; padding: 2px;"> PLU(0001)TARE 0.000 </div>	
	and enter the tare weight value(note: tare weight is fixed weight value in the method of fixed weight)	   	
5	Press 	<div style="border: 1px solid black; padding: 2px;"> PLU(0001)PRICE 0.000 </div>	
		   	
6	Press  and choose valuation method: including: 0 = weight; 1 = piece; 2 = fixed weight;	<div style="border: 1px solid black; padding: 2px;"> PLU(0001)WEIGHT TYPE 0 </div>	
		   	
7	Press  and input special information number	<div style="border: 1px solid black; padding: 2px;"> PLU(0001)SPECIAL NO 0 </div>	
		   	
8	Press  and input the days of expiry date	<div style="border: 1px solid black; padding: 2px;"> PLU(0001)VALID DAYS 00 </div>	
		   	
9	Press  and input commodity code	<div style="border: 1px solid black; padding: 2px;"> PLU(0001)PLU CODE 228100 </div>	
		   	
10	Press and enter the flag digit of bar code, suppose the flag digit of bar code is 2, then input  	<div style="border: 1px solid black; padding: 2px;"> PLU(0001)BARCODE ID 22 </div>	

11	Press  and start to enter the commodity name (for example enter four words "Apple")	 			
					
12	Press  , save Settings and return to standby mode When all content is set	 			
					

Note : Name can be input 12 characters at most.

5.2 Shortcut setting

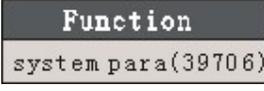

Step	Operation	Display			
		Tare Weight	Net Weight	Unit Price	Total Price
0	Standby Mode	 			
					
1	Press 	 			
					
2	Press shortcut  (press  code+enter when there is no shortcuts)	 			
					
3	Press  and enter the unit price (note: The price of per kilogram)	 			
					
4	Press  and put the value of tare	 			

	weight (note : tare weight is the value of fixed weight in the method of fixed weight)				
5	Press 	PLU(0001)PRICE 0.000			
					
6	Press  and choose the method of valuation: 0=weight; 1 = piece ; 2 = fixed weight;	PLU(0001)WEIGHT TYPE 0			
					
7	Press  and input special information No.	PLU(0001)SPECIAL NO 0			
					
8	Press  and input the days of expiry date	PLU(0001)VALID DAYS 00			
					
9	Press  and input the commodity code	PLU(0001)PLU CODE 228100			
					
10	Press  and enter the flag digit of bar code, suppose the flag digit of bar code is 2,then input  	PLU(0001)BARCODE ID 22			
					
11	Press  and start to enter the commodity name (for example enter four words 'Apple')	PLU(0001)NAME Char a Apple			
					

12	Press  , save Settings and return to standby mode When all content is set				
					

5.3 Special information setting

This scale can be set up 10 special information of Chinese characters (numbered from 1 to 10) and 12 characters (Numbers from 11 to 22) special information and can make each PLU label paper state information call any of these three print; when in continuous paper state, the 1 ~ 4 Chinese characters of these special information correspond to the header line 1 ~ 4, 5 ~ 8 correspond to 1 ~ 4 lines of the footer. Each Chinese character information content can be set up 30 characters, and most every character information content can be set up 30 characters at most. The password of special information setting is “44444”.

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode				
				
Press 				
				
Press 				
				
Press  and enter the first special information content setting				
				 XX
Pressing  switch different special information (  ); Here set the first and eleventh special information content as an example; pressing  or  Can view the contents of the location code of each special information up and down;				

(such as the first special information content is: everyday low price) input Chinese characters location code of "day" 4476	SPEC(01) Char a Welcome		
Press save Settings and return to standby mode When all content is set	Welcome 2015-05-16 10:30		

六、Common label format called

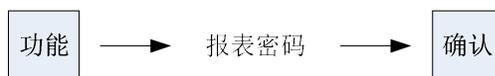

6.1 TM-A series barcode printing price scale label format

- ✓ 60×40 general format: press[FUNC][96040][ENTER]。
- ✓ 40×30 general format: press[FUNC][94030][ENTER]。
- ✓ 55×30general format: press[FUNC][95530][ENTER]。
- ✓ 60×40 factory format: press with gross weight ,tare weight: press [FUNC][66040][ENTER]。
- ✓ Shijilianhua60×40 specific format: press[FUNC][76040][ENTER]。
- ✓ Complete 60×40packaging label format: press[FUNC][86040][ENTER]。
- ✓ Farmer factory merchant60×30 specific format: press[FUNC][96030][ENTER]。
- ✓ Yichulianhua60×38 specific format: press[FUNC][96038][ENTER]。

七、Statistics

7.1 Statistical reports (the view of statistics use the continuous paper checking only in the condition of continuous paper without special instructions)

The method of viewing statistical reports is:

1. Call commodity information according to the PLU number :

Serial No.	Report Name:	Password :	将报表通过 USB 下载到 U 盘时的操作密码
1	Period of daily reports	8804	56804
2	Period reports on a single product	8805	\
3	Period summary report on single product	8806	56806
4	Daily sales reports	8807	\
5	Daily sales reports on a single	8808	56808

	product		
6	Daily sales detailed reports	8809	56809
7	Detailed reports on a single product	8810	\
8	Period detailed reports	8811	\
9	Summary report on single product	8812	\
10	Inventory report on single product	8814	\
11	Time detailed reports on a single product	8816	\

Note: sometimes statements stored data is more, please tear report after electronic scale prints out the reports completely. We will to illustrate the operation of a few statements as examples, since the report operation process is roughly same, so we don't list all the statements, the rest of the reports refer to the operation.

7.1.1 Period of daily report

The password of period of daily report is 8804

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Welcome 2015-05-16 10:30 </div>			
	[Weight]	[Weight]	[Price]	[Price]
Press  when the stable light is lit	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Function system para(39706) </div>			
	[Weight]			
Press    	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Function system para(39706) </div>			
	[Weight]		[Price]	
Press  and display the current date: June 2nd, 08	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Function system para(39706) </div>			
				[Date]
Press  and display the query time	<div style="border: 1px solid black; padding: 5px; text-align: center;"> Function system para(39706) </div>			
			[Time]	[Time]

Input the range of the query time,such as:from 7:00 to 23:00,enter 0 7 2 3	Function system para(39706)			
Press and print reports,then return to the standby mode	Welcome 2015-05-16 10:30			

7.1.2 Period report on single product

The password of period report on single product is“8805”

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
Press when the stable light is lit	Function system para(39706)			
Press 8 8 0 5	Function system para(39706)			
Press and display the current date: June 2nd, 08	Function system para(39706)			
Press and display the query time	Function system para(39706)			
Input the range of the query time,such as:from 7:00 to 23:00,enter 0 7 2 3	Function system para(39706)			

Press 	Function system para(39706)			
				
Input a PLU number that is inquired, such as inquire commodity no. 1, input 1	Function system para(39706)			
				
Press and print reports, then return to the standby mode	Welcome 2015-05-16 10:30			
				

7.1.3 period summary report on single product

The password of period summary report on single product is“8806”

Operation	Display			
	Tare Weight	Net Weight	Unit Price	Total Price
Standby Mode	Welcome 2015-05-16 10:30			
				
Press  when the stable light is lit	Function system para(39706)			
				
Press 8 8 0 6	Function system para(39706)
