## Introduction

---

Thank you for purchasing the Optimus Portable Data Terminal from Metrologic. This guide lists the contents of the software CD that ships with each unit (this software is meant to run on Windows 98/ME, 2000, and XP machines only). It is also meant to serve as a reference for quickly setting up sample programs to run on the Optimus. For additional information, please consult the manuals included on the CD.

## Start Menu Applications

---

The software CD should run automatically when inserted into the CD drive. If it does not, please click on your “My Computer” icon, click on your CD drive, and click on the “setup.exe” file. After the install is completed, a folder called “Optimus Software” will be setup in your “Programs” list containing links to the following:

Shortcut Name	Description
Optimizer	Links to Optimizer.exe, a graphical programming tool used for rapid development of applications for your Optimus.
Program Loader	Links to Prog_Load.exe, a tool for downloading system files, BASIC runtime files, BASIC programs, and ‘C’ programs to your Optimus.
DataOptimizer	Links to DataOptimizer.exe, a program used for real-time communication with the Optimus (only applies to certain models of the Optimus). This program can be used to quickly get setup for real-time communication and update to an existing database. A sample is included on the CD to illustrate the usage of this program (see <i>Sample Programs</i> section of this guide).
Readme	This file.

For more information please refer to (default location) “C:\Program Files\Metrologic Instruments\Optimus\”
